the forehead of the user by pressing the mount pad to the forehead of the user by an elastic force generated by spreading said side frames.

2. (Amended) A head-mounted display apparatus according to claim 1 further comprising:

earphone holding members arranged on said side frames to hold earphones;

wherein each of said earphone holding members is composed of an elastic body fixed to a lower side of each of said side frames and is arranged to hold, with an elastic force, a stem part of each of the earphones inserted into said elastic body.

3. (Amended) A head-mounted display apparatus, comprising:

a front frame on which a display part is mounted;

right and left side frames which are connected respectively to two end parts of said front frame by hinge parts in a foldable manner;

a mount pad disposed in a position of said front frame opposite to the forehead of a user; and

elastic members provided in parts of said right and left side frames located opposite to the temple parts of the user,

wherein said mount pad is arranged to be urged toward the forehead of the user by elastic forces of said right and left side frames generated toward the head of the user, and each of said elastic members covers one of said right and left side frames.

4. (Amended) A head mounted display apparatus according to claim 7, wherein each of said right and left side frames has a thickness thereof thicker on an inner side thereof which abuts on the head of the user than on an outer side thereof, and a hole is formed in a part on the outer side of each of said right and left side frames.
